

To whom it may concern;

I wish to voice my opinion regarding the implementation of Broadband Over Powerline transmissions as proposed by some huge corporations and well-financed lobbyists. The FCC, as protector of the people's air, should have long ago considered this technology as a detrimental interference, woefully inadequate for the intended purpose, and moreover, an intrusion into the lives and welfare of the American people.

The destruction or at the least, deterioration of the shortwave bands is not only a violation of ITU laws that protect international broadcasters from interference and jamming, but it will also destroy many people's life hobby. Amateur radio will be reduced to users with high-power amplifiers and large antennas. Long range emergency communications will be crippled, which will inevitably put peoples' lives in jeopardy.

Block this nonsense before it is too late to exercise good old fashioned common sense.

Thank you for allowing me this forum in which to comment on this extremely serious matter.
